

User Manual

Introduction to website:

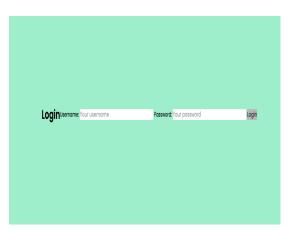

Food2Go is a complete visual website aimed toward people who are ambitious in pursuing their ideal body goal but struggle in terms of balancing their diet to help them reach that goal which they long for. It caters to people of all body types in the following 3 categories, **Weight Loss, Stay Lean** and **Bulk Up**. Each category contains information on what that category means; for example, if you are unsure of what weight loss is we explain this to the user in simple terms, 'It is burning more calories than you take in. The reduction of total body weight'. How to achieve your desired goal is mentioned in helpful points we have researched and added to assist the user. Tips are also included on how to effectively reach your goal.

Register/Login:

Users can scour the website and navigate themselves throughout the website upon first inspection, however certain features such as ordering food and tracking their weight remain unavailable until the user has logged in. One can do so by first registering an account by clicking the person icon displayed on the top right of the web page and then logging in after.

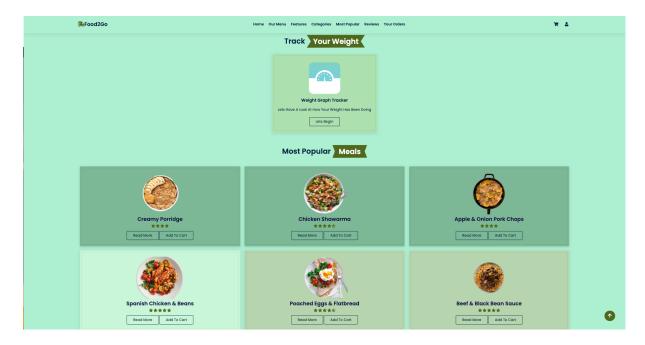

Home:

The home page displays several features accessible to the user such as the varying body types mentioned in the introduction, as well as that if you scroll down, you can see a chart where one is able to track their weight and a most popular meals section displaying foods which the user may like.

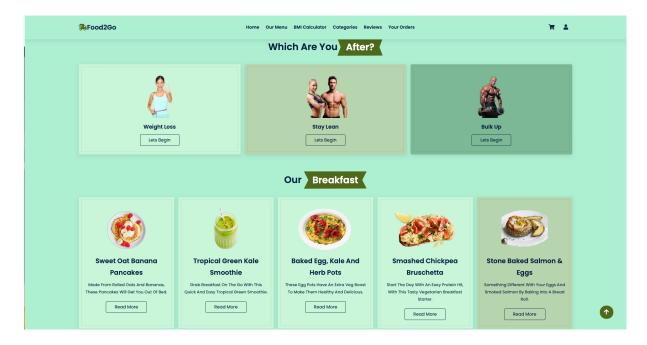

Track Your Weight:

Users can track their progress by using the weight graph which gives them the option to log their weight, start tracking and reset weight tracking.

Our Menu/Categories:

Located as the second button in the navigation bar you can see the "Our Menu" button, once this is clicked it brings the user to a page displaying a variation of breakfast, lunch, and dinner foods all colour coded to match the specific weight goal. Clicking the categories button displays the three weight goal options.

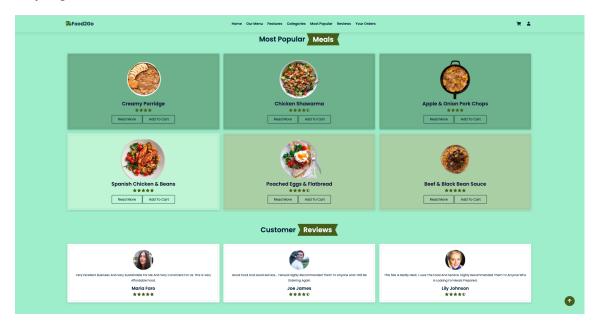

BMI Calculator:

Once clicked into the "Our Menu" section, the option for a BMI Calculator Is then displayed in the navigation bar. This page displays the BMI Calculator followed by a calorie calculator and a pie chart to visually display the number of macronutrients one is consuming to maintain their current weight.

Most Popular/Customer Reviews:

The most popular section displays foods which are regularly chosen by users and have a high popularity rating amongst the general public. This is for style, and these are fixed meals we chose to display. This is shown by the star rating that each meal has. Customer reviews are a combination of fake reviews and random images used for styling.

Creating an Order/Recommendations:

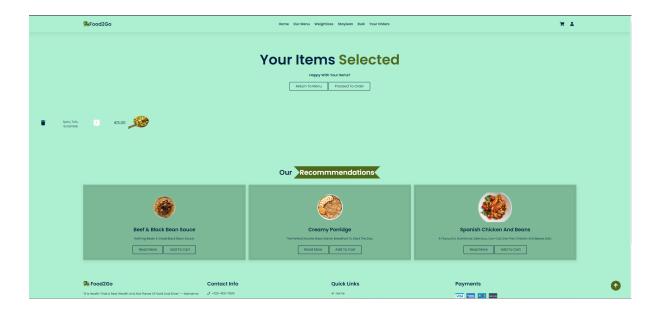

To order an item the user would simply click the read more section of a meal the peaks their interest and would click the add to basket button.

The user would then be able to view their shopping basket by clicking on the trolley icon displayed on the top right of the screen and then clicking into "shopping basket".

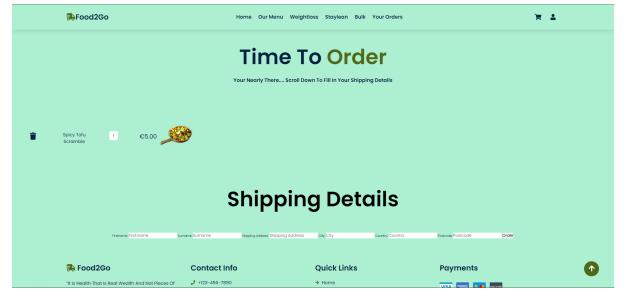

The selected items of the user are then shown inside the shopping basket with two options being displayed, the option to "Return to Menu" and continue browsing and the option to "Proceed to Order".

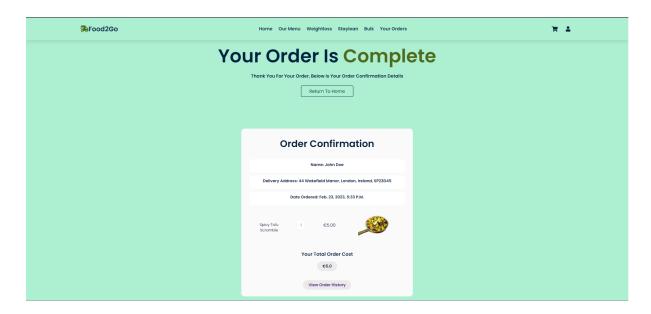

Below the selected items is a recommended system that displays meals to the user based on confidence of certain meals that were bought together previously and displays the meals we think the customer will decide to purchase.

Order Completion:

Once the user has proceeded to order, they are brought to a page where they can fill in their shipping details.

Confirmation of the order is then shown.

Users can view their order history, from this they are able to see the time, date, and shipping address of all their previous orders.
